How do I use the internet? Specially I use it for research or search. I look information about recipes too, about many topics I need to know, meanings of words, translations, I read every kind of articles and news, of all the world and Mexico news. At my work I use internet for making video conferences, the distances are shorter this way, and I can work for the whole planet for the kind of work I do, which is to develop software systems. Today, I'm mostly focused on logistic and customs systems. I found out, my work is worthy for every body ask for it, no matter where they are from.

There are so much advantages today about the use of the internet, that I could not live without it. Is not funny that Internet was declared human right today, because we use it for support all our lives, to attend the school, make money transfers, and pay taxes.

The disadvantage is the privacy lack, and the danger of being watched and the vulnerability of the data.
